

Claims

1) - "DEVICE TO ENERGIZE WATER", **characterized:** for being entirely dived in the water to be treated and to be understood by a silo with closing it stanches (1), formed for a metallic stowage and/or material plastic (2); e for a base of rubber and/or metal (3) of support in the deep one of the water reservoir (5) of an adobe filter, of one has supported for demijohn of mineral water or others and/or for a handle (6) to inside hang the device of a reservoir (7) of bigger capacity, as a box of water or others, suspended way that said device are dived and inside of the water; said device it is formed still by an internal load of magnets (4), lodged inside of the selected silo, made use in a specific way to create magnetic flow (2) and so that its magnetism acts from the central region of the water mass.

2) - "DEVICE TO ENERGIZE WATER", as demanded in 1, characterized for the fact of that the cylindrical, to be squared or rectangular, closed silo (1) to the vacuum, its stowage (2) is of stainless steel and/or material plastic, ceramics or glass, its base (3) is of synthetic rubber and/or molecular metal and magnets and/or glass (4) is molecular magnets, made use a form to create magnetic flow with magnets interacting with the same polarity
